

## Rearrange the dominoes to show the correct sequence

As the air continues moving from the west  it starts to sink	The cooling causes water vapour in the air  to condense	blows towards Morocco  from the west	snow sometimes falls  This is know as <b>RELIEF RAINFALL</b>
on the sheltered leeward side  This is known as the rain shadow effect	forming clouds.  As the air rises higher	<b>START</b>  Warm air from the Atlantic ocean	This effect helps to create desert conditions in western Algeria.  <b>FINISH</b>
carrying a lot of moisture.  The warm air is forced			The sinking air warms up  so any water droplets in the air
to rise over the Atlas Mountains.  As it rises it starts to cool.	heavy rain falls on the windward side of the mountains  and in winter	and leaving clear blue skies  along with dry conditions	evaporate  making the clouds disappear
